Prof Engleman

Dear Sir

Hastings

I have been much encumbered by business today I am closing out my Electrotyping & Stereotyping ~~Preparation~~ to return to my Profession — Medicine. Having no live help hitherto has greatly restricted my efforts in Botany — Since your letter came to hand I have made every exertion to fill yours wished with regard to the Juncea. When friend J. Tolander left he requested me to send you Specimens of the J. Galactea in fruit — I made seven trips in order to find it

definitely you it up in despair
and to wrote him - but at last
in a moist sandy locality on
Lobo Creek I found it
and secured a good
supply - it appears seldom
to fruit or come to maturity
in dry soils. As soon as
~~the~~ ~~season~~ ~~closed~~ I will
send on my collection
they are splendidly prepared
and of about a dozen
species they will not fail
I hope one or two I have
perhaps more. They will
please you. Next week
I have a kind offer from
a Shippman across the
Bay to spend some time
with him - perhaps it is
not too late to do something more
expenses are very high
here and business dull

and when we get a free pass to
the wood I like to make the
most of it.

The Coll^{ed}. of Nat^l. Sciences is
now more flourishing than ~~it~~ to Prof.
Whitney, & Mr. Stern's exertions.

These moneyless institutions
have to struggle against the
Common Folks.

I'd note in the first line
of my efforts is simply to
report progress and assure
you that if you were here
in person scarcely more
diligence could be used
but one who is an act and
can discretely and intelligently collect
has greatly the advantage —
Bolander is much more
familiar with the department
than I am.

About the last of next month
I think you will hear from
yours truly A. T. Gillog^e M.D.

San Francisco March 9 A.D. 1868

Dr. Engleman

Dear Sir

Should you identify any of
our Alaskan Conifers please address
Prof. G. S. Davidson Germantown Pa.
The whole matter is subject to his order
as Chief of the Scientific Department
of that Expedition.

And oblige

Yours truly
A. Kellogg M.D.

At July 26.

Abies Williamsoni

Summit Camp

Sierra Nevada Mts.

July 28th 1870

Dr. Inglesian

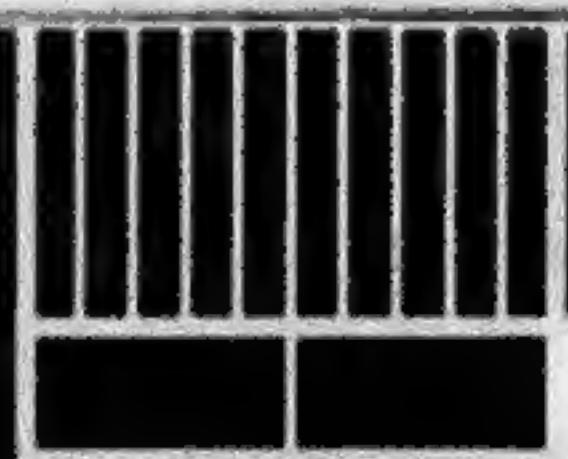

Dear Sir

As you

have been anxious to see the
flowers of the Abies Williamsoni
I take the first occasion
after obtaining to forward by
Wells Fargo Express a small
spc. I have been here
alone in camp a month or
more, anxiously waiting and
looking for them.

Have found many new
very interesting plants.

It would be well to remark
that the reflected scales of the

of the Cone are not
peculiar to it the *Pinus*
Monticola here has the
Scales reflexed in precisely
the same manner.

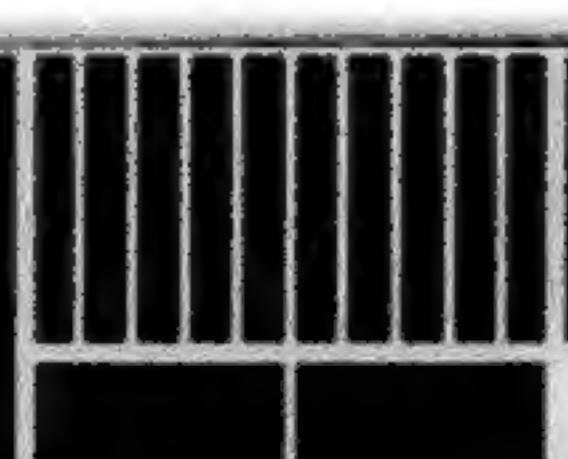

I do not suppose you can
attach any importance
to that fact but some at least
have as will be seen in the
P. K. P. & Vol VI I think (or
perhaps V.)

In best

Yours truly

A. Nelsong

Dr. The young cones that
mature this season are now about
1½ inches long scarcely $\frac{1}{4}$ an inch diam
dark purple with a slight bloom
mostly turned upward, so far as yet
obs' th' not always at maturity they
turn down or are rather pendulous.

Garden

Yours overtook me morning
I quite in disorder & a few day's delay -
Enclosed find what I take to be the James
desired - Should it prove so let me know
I will send all you wish in good order -
perhaps it would be best to send by mail
Thank you for your valuable contributions on
the Liver - A copy was also presented
the Acad in your name as requested.

Yours truly

A. Kellogg
